

## Products and Services Catalogue 2020

### Access Management *Simplified!*

**Welcome to Passport Technologies**, a whole new world of client access, customer service and information management for your cloud-based membership management environment. All our products are manufactured with pride in North America.

Whether your operations require a fully integrated access management system or a single turnstile, Passport Technologies has the products and the expertise to improve the client-access process at your facility, as well as the front reception experience for your members.

## Wave Passport System

### Making Waves with RFID

Prior to entering the access management industry in 2006, **Passport Technologies** experts worked extensively with RFID and automated control technologies. This expertise has enabled Passport Technologies to design and develop the ultimate solution for optimizing client access management at your facility – the **Wave Passport System**.

### Simplicity, Security, Sustainability

Passport Technologies **Wave Passport** systems are designed for ease of installation and integration with your cloud-based membership management platform. They also simplify and optimize facilities access for your customers, and improve your information management.

Wave Passport systems leverage the enhanced automatic identification features provided by RFID technology to deliver improved client and facilities security while reducing fraud. Unlike other access management technologies, the RFID chip inside Wave Passport keyfobs, cards and bracelets cannot be photocopied, reproduced or modified in any way.

Though all **Passport Technologies** products are designed for high traffic applications, **Wave Passport** fobs and readers are fully encapsulated to ensure maximum durability, optimal functionality, and reduced lifecycle costs. RFID is a sustainable technology deployed across countless industries and around the world.

### Software Interface and Control Module

Passport Technologies is proud to offer the industry leading simplicity and flexibility of the SICM to fitness facilities owners and operators around the world. If you use cloud-based software to manage client access at your facility, the SICM is the only interface control you will ever need.

Fully integrated with your web-based platform, fully featured, and fully customizable with options such as:

- **Local Database:** Ensures system functionality in the event of temporary loss of internet in a cloud-based environment
- **Anti-Tailgate:** Detects additional access attempts on a single client ID (additional hardware required)
- **PPT Check-in Screen:** Provides a check-in screen even when the user is in an application other than the client access software. Accessible from any computer browser on the local network
- **Hours of operation:** This is a realtime clock function that allows owners and managers to manage the hours of operation for the access point in non 24-hour applications.
- **And Many More:** Contact Passport Technologies to learn more about optional features for the SICM.

## Key Tags and Cards

### Branding in the Palm of Your Hand
